

EduGenie: Google Gemini Powered Learning Assistant

8. Project Demonstration

This document provides a demonstration script based strictly on the scenarios and exploration activities documented in the supplied EduGenie project document.

8.1 Demonstration Introduction

Start the application with `uvicorn main:app --reload` and open `http://127.0.0.1:8000`.

Explain that EduGenie combines a simple web interface with FastAPI and AI models.

8.2 Demonstration 1 — Asking Questions

Open the QnA task.

Enter the documented example question: "Which is the largest ocean?"

Submit the request and show the generated answer.

8.3 Demonstration 2 — Explaining a Topic

Select Explain.

Enter an educational concept.

Submit the request and show how the explanation is presented in simplified language.

8.4 Demonstration 3 — Summarizing Content

Select Summary.

Paste a long educational paragraph.

Submit the request and show the concise version designed for quick revision.

8.5 Demonstration 4 — Generating a Quiz

Select Quiz.

Use a topic or passage such as the documented Pythagoras theorem scenario.

Show that three questions are generated with four options each.

The source also documents that the quiz interaction can correct an answer when the learner selects incorrectly.

8.6 Demonstration 5 — Learning Recommendations

Select Recommend Path.

Enter a topic such as SQL.

Show the beginner-to-advanced structured learning path and the associated resource guidance.

8.7 Demonstration 6 — Frontend Integration

Show that the task is selected from the dropdown.

Show the text input area.

Submit the form.

Point out that the result appears below the input area in real time.

8.8 Demonstration Checklist

Application opens successfully.

Q&A; returns an answer.

Explanation returns simplified content.

Summary produces concise revision material.

Quiz produces three MCQs with four options each.

Learning recommendations provide structured guidance.

8.9 Closing Demonstration Message

EduGenie is presented as an accessible learning companion that combines cloud-based intelligence with a lightweight web interface.

The documented conclusion highlights personalized education, modularity, scalability, and future expansion possibilities.

Conclusion

The demonstration should show the five major learner workflows end-to-end and make the connection between the user interface, FastAPI endpoints, and AI modules visible to reviewers.

Source basis: EduGenie project document supplied with this request and the repository structure shown in the supplied reference image. Where the source did not specify an implementation detail, this documentation preserves the documented scope rather than inventing project facts.
